STAINLESS STEEL MULTISTAGE PUMP

# About Us

## Our Management Team

Vossche was founded by Mr. Vossche Alton, who was born in Germany, but migrated to the USA in 1984 to set up his pump manufacturing business. From the rudiments of a small company, over 30 years ago, Vossche now boasts seven operational divisions each headed by a dedicated and highly qualified managing director. These divisions are:

- Product Planning
- Research and Design
- Product and Operations
- Sales and Marketing
- Logistics and Warehousing
- Export Sales
- Technical Support

Through these able teams, we have provided and continue to offer stellar quality products and services to consumers throughout the world including North America, South America, Europe, Africa, Asia and Australia.

## Our Company

Vossche headquarter is located in Texas USA, where we have a factory that covers an area larger than 140,000 square meters. Of these, 120,000 square meters cover building space, and our net capital is registered at USD 160 million. We have an average of 1,855 employees worldwide.

We produce over 2 million pump sets every year under 12 major categories with more than 2,000 specific models for power ranges 0.5kW - 200 kW. Our range of products can service needs in various industries including refrigeration, mining, metallurgy, domestic water supply, agricultural irrigation, municipal services, groundwater applications, water lifting, sewage water or clean water disposal systems, building and industrial water supply, heating and ventilation, spa baths and swimming pools, among many more.

## Vossche Pump Group

Together with our subsidiaries in strategic locations as well as affiliated distributors worldwide, Vossche believes in delivery of quality products for our consumers. As such, all our products undergo comprehensive production and operational testing to ensure that they adhere to the high standards we have set for ourselves. This is why our consumers trust us to deliver the best pumps in the market and are continuously satisfied with our outputs. In addition, we dedicate a huge amount of time and resources towards research, development and innovation to discover new and better models, applications and methods of production to continue adding value for clients.

Light-type Stainless Steel Multistage Pump

# BL(T)

## Light-type Stainless Steel Vertical Multistage Centrifugal Pump

### Product Introduction

Light-type stainless steel vertical multistage centrifugal pumps such as BL(T)2, BL(T)4, BL(T)8, BL(T)16, BL(T)20, BL(T)32, BL(T)45, series are non-self priming pumps absorbing the advanced technology from home and abroad. They adopt standard vertical motor and alloy mechanical seal, which makes the replacement more convenient. The overflowing part is made from stainless steel, applicable for light-corrosion medium. Relying on the high efficiency, energy saving performance, reliable quality, wide usable range, our products receive the great popularity after they have been launched.

### Feature

1. The premium hydraulic model and advanced workmanship greatly improve the pumps' performance and extend the service life
2. Adopting hard alloy and fluorin rubber for the mechanical seal, which ensures the pumps' reliable operation and endures high temperature of transmission medium.
3. As the overflowing part of pump is stamped and welded by stainless steel plate, which is suitable for slightly aggressive liquids.
4. Compact design small size, light weight, low noise, excellent energy saving performance, easy to maintenance.
5. Inlet and outlet of the pump stand in the same line with the pump base, which can be used directly in the pipelines
6. Clients can allocate the motor based on their own needs.
7. We provide intelligent protector to avoid dry running, default phase and over loading of the pump to meet customers' demand

### Characters

When the service life of mechanical seal runs out, no need to disassemble motor from the pump body, its replacement can be carried out by taking the coupling out and disassembling the gland of mechanical seal, so that the concentricity between motor shaft and pump spindle can be ensured, as well as the sealing reliability of the pump section.

### Working Condition

1. Liquid temperature: Normal type 0°C~+68°C, hot water type 0°C~+120°C
2. Ambient temperature: -15°C~+40°C
3. The maximum working pressure: 1.0 Mpa
4. When the density or viscosity of the transmission medium exceeds that of water, it is necessary to select a driving motor of high-power.

### Transmission Medium

1. Thin and clean non-flammable and non-explosive liquid without solid particle or fibres.
2. Mineral water softened water, pure water, edible vegetable oil and other light chemical mediums.
3. The main material of pump is stainless steel, which is suitable for slightly aggressive liquids.

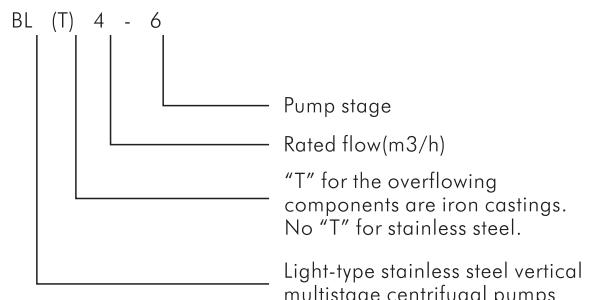

### Motor's Selection

Full-enclosed and ventilating two-pole standard motor  
Protection class: IP55  
Insulation class:F  
Standard voltage (50Hz): Single phase 220V Three phase: 380V

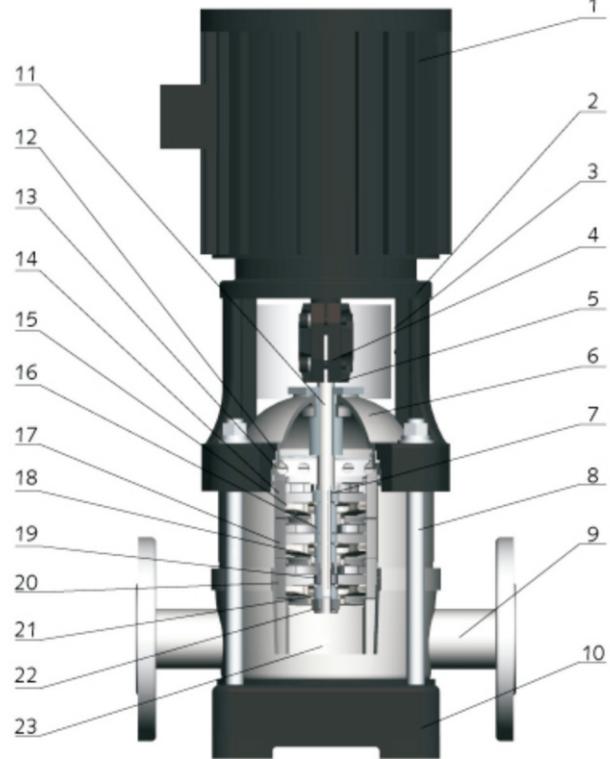

### Application

1. Water supply: water filtering and water delivery in water plants, water delivery for sub-water plants, pressure boost in main pipelines and in high-rise buildings.
2. Industrial pressure boost: flow water system, cleansing system, high-pressure washing system, fire extinguishing system.
3. Industrial liquid delivery: cooling and Air-conditioning systems, boiler water supply, condensation system, machine tool, transmission of the acid and alkali mediums.
4. Water treatment (Water purification): ultra-filtration system, reverse osmosis system, distillation system, water treatment system for separator and swimming pool.
5. Irrigation: irrigating of crops, spray irrigation and drop irrigation.

## Performance curve

All performance curve are based on the measured values when a motor works under the voltage of 380V at a constant speed of 2900r/min.

The capability of flow and head conforms to iso9001.

Measurment is done in 20°C air-free water of which viscosity is 1mm<sup>2</sup>/s.

The operation of pump shall refer to the performance range marked in green curve so as to avoid damages caused by over-load.

## Product Scope

Performance curve

- All performance curves are base on the measured values when a motor works under voltage of 380V, at a constant speed of 2900r/min.
- The capability of flow and head conforms to ISO9001.
- Measurement is done in 20°C air-free water of which viscosity is 1mm<sup>2</sup>/s.
- The operation of pump shall refer to the performance range marked in green curve so as to avoid damages caused by over-load.

## Product Scope

### Light-type Stainless Steel Horizontal Multistage Centrifugal Pump

### Product Introduction

BW, BWJ(T) Light-type stainless steel horizontal multistage centrifugal pumps are non-self priming pumps absorbing the advanced technology from home and abroad. They are classified into two kinds: cylinder type and sectional type. They adopt horizontal motor and alloy mechanical seal, which makes the replacement more convenient. The overflowing part of the pump is made of stainless steel 304, applicable for light-corrosion medium. Relying on the high efficiency, energy saving performance, reliable quality, wide usable range, our products receive the great popularity after being launched.

### Feature

- The premium hydraulic model and advanced workmanship greatly improve the pumps' performance and extend the service life.
- Adopting hard alloy and fluorin rubber for the mechanical seal, which ensures the pumps' operation and endures high temperature of transmission medium.
- As the overflowing part of pump is stamped and welded by stainless steel plate, which is suitable for slightly aggressive liquids.
- We provide intelligent protector to avoid dry running, default phase and over loading of the pump to meet customers' demand.
- The motor is with lengthening shaft, axial water inlet and radial water outlet.

### Working Condition

- Temperature range of medium: Normal type 0~+68°C, hot water type 0~+120°C
- Maximum ambient temperature: +40°C
- Maximum working pressure: 10 bar
- When the density or viscosity of the transmission medium exceeds that of water, it is necessary to select a driving motor of high-power.

### Transmission Medium

- Thin and clean non-flammable and non-explosive liquid without solid particle or fibres.
- Mineral water, softened water, pure water, edible vegetable oil and other light chemical mediums.
- The main material of pump is stainless steel, which is suitable for slightly aggressive liquids.

### Motor's Selection

Full-enclosed and ventilating two-pole standard motor  
protection class: IP55  
Insulation class: F  
Standard voltage (50Hz): Single phase 220V Three phase: 380V

## BW/BWJ(T)

### Performance curve

- All performance curves are base on the measured values when a motor works under voltage of 380V, at a constant speed of 2900r/min.
- The capability of flow and head conforms to ISO9001.
- Measurement is done in 20°C air-free water of which viscosity is 1mm<sup>2</sup>/s.
- The operation of pump shall refer to the performance range marked in green curve so as to avoid damages caused by over-load.
